

EGN 4624

Low Stakes

Reflections.

- Students must be active participants in the course and should apply the concepts from the readings and videos to their workplace or senior design teams. You recently watched a series of video lectures by Professor Grim, including topics on the difference between facts and values, Lives to Envy, Lives to Admire and on the classical theories of ethics. The major focus of all of these lectures is on establishing a personal value system. You have also read the book Engineering Ethics. In this paper explain, in your opinion, based on everything you have learned thus far in the course how you can integrate the concepts of a personal value system with the ethical responsibilities of being a professional engineer.
- Paper structure
 - What were your key learnings? (Bullet list of 5 key learnings. Follow each bullet with a brief discussion in paragraph form) (1 page maximum)
 - How can you integrate the concepts of a personal value system with the ethical responsibilities of being a professional engineer? (2 pages maximum)
